OBJECTIVE

This workshop is organized within **Stand4purity**, a project co-financed by the European Union to start a coordinated action for supporting future standardization activities in the field of Carbon Capture Utilization and Storage (CCUS), ensuring that the needs and interests of the whole value chain are represented.

For this reason, with the support of the [CEN/TC 474](#) and The Netherlands Standardization Body ([NEN](#)), UNI has organized the workshop “From CO₂ policies to standards” aimed at:

- providing an overview of the status of European policies on CCUS;
- sharing information on the most relevant European innovation projects;
- fostering dialogue among institutional stakeholders, industries, and investors to gather input for the identification and prioritization of standardization and regulatory needs.

The contributions gathered during the workshop will be incorporated into a follow-up deliverable a “Roadmap for CCUS standardization needs”, a public document which UNI and Stand4purity experts will develop for the European Commission to support the identification of future standardization priorities.

28th May 2026 9.00 - 13.30
